# NETFLOAT

Tel: 01932 222638

## Protects your fish from predators.

[Print Preview](#)

Netfloat is a unique protection system, consisting of floating plastic net rings, that protect your pond fish from predators such as Herons and Cats. The rings are less obtrusive than conventional pond netting and can be fitted to any shape fish pond. The Netfloat system works as an efficient deterrent protecting any Koi Carp or Goldfish from Heron attack! Rings can be cut or left out to allow pond plants such as Lilies to grow through and the rings can easily be removed and replaced for pond maintenance.

### WHY COVER YOUR COMPLETE POND WITH NETTING?

The Netfloat fish protection system is a set of interlocking floating net rings that cover the edge of your pond leaving the centre free - unlike conventional netting.

THE POND BELOW HAS TWO NETFLOAT RINGS DEEP AROUND THE CIRCUMFERENCE.

  
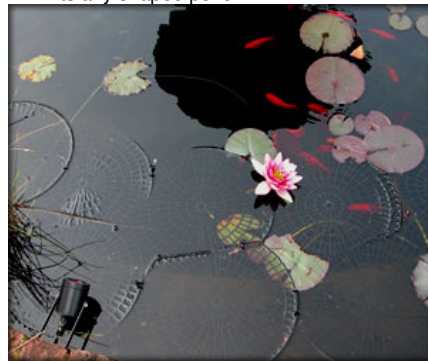

Click on images for a larger view.

- Less obtrusive than conventional netting.
- Rings can be left out or cut around plants.
- Easy to install.
- Fits any shaped pond.

Rings can be cut for plants.

Rings unobtrusive in the pond.
